

What export options does ProKitchen design software offer

ProKitchen design software offers a variety of export options for design files, reports, and data to share with clients, manufacturers, and other design programs. Key export options include: [↗](#)

Design file exports

- **AutoCAD:** Export your designs as `.DWG` or `.DXF` files, which allows architects and engineers to integrate your kitchen plans directly into their broader building plans.
- **Google SketchUp:** Export a 3D version of your design as a `.3DS` file. Your clients can use this file to view and explore the design in a free, lightweight viewer without the full ProKitchen software.
- **ProKitchen Showroom:** Save a design in the proprietary Showroom format. This is helpful for displaying the design in the ProKitchen Showroom application.
- **ProKitchen Mobile App:** Export files to be viewed on Android or Apple mobile devices, allowing for easy sharing and viewing on the go.
- **Virtual Reality (VR):** Convert 3D renderings to a format compatible with VR headsets, such as Oculus Quest, for an immersive client experience. [↗](#)

Report and data exports

- **XML Reports:** Generate XML reports of your catalogs, useful for moving product data to other systems.
- **QuickBooks:** Export customer, design, product, and pricing information directly to QuickBooks Desktop or QuickBooks Online for accounting and invoicing.
- **User Data:** Export user-specific data from your designs, which helps with keeping client information accurate and organized.
- **Combined Reports:** Bundle multiple documents, like design views, bill of materials, and price quotes, into a single PDF file for a more professional client presentation.
